

# Industrial Time Series Forecasting & Anomaly Detection

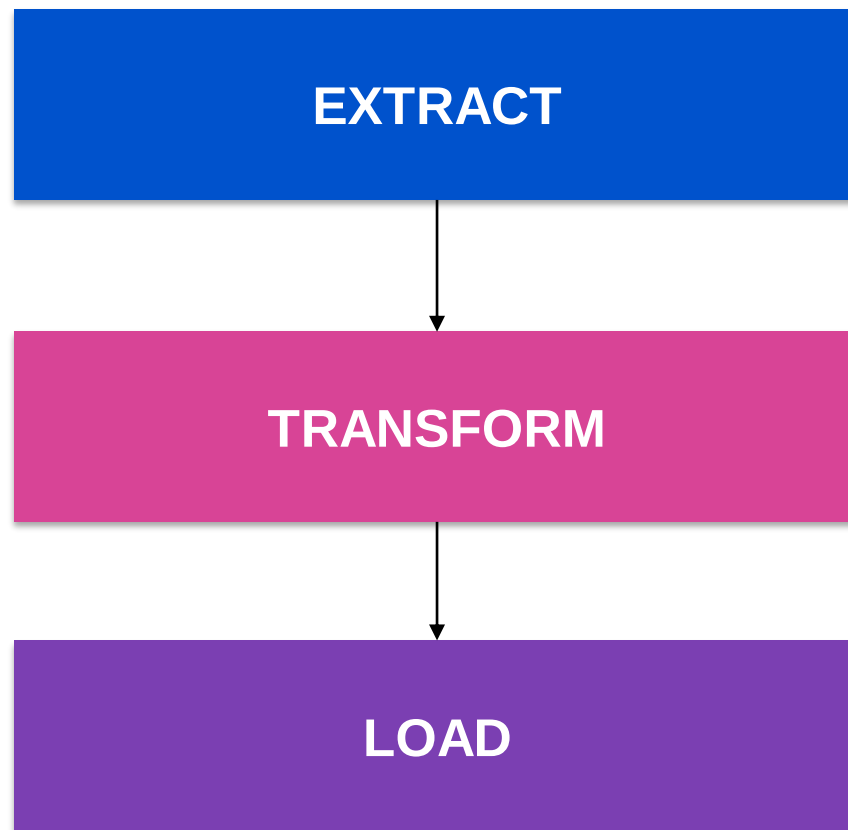

## RTDIP in a Nutshell

→ modular and extensible  
ETL framework

**Extract:** Ingest real-time and historical data from heterogeneous industrial sources

**Transform:** Clean, validate, enrich and prepare time series data for downstream analytics and ML workloads

**Load:** Persist processed data into data lakes, databases or analytics platforms

## Our Additions

→ Advanced Time Series Analytics

### Model-based TS-Forecasting:

- AutoGluon
- XGBoost
- LSTM
- CatBoost
- Prophet

### Decomposition:

- Classical decomposition
- STL, MSTL methods

### Anomaly Detection:

- statistical MAD and IQR approaches
